

Without Rain for 120 Days and Counting!!!

This is the desert you may say. Well, you are correct. This however, is a record breaking drought which has been taken lightly because it has occurred during the winter when temperatures are mild. Generally speaking, the weather has been fantastic!

This does however pose some unique problems associated to your turf and plants. Irrigation is a fine tool for supplemental watering, yet not a replacement for the "real stuff". Oddly enough, the acidic nature of the atmosphere helps cleanse the soil during rain and washing out contaminants such as bicarbonates. More than ever you are seeing the white rings around your trees and shrubs and maybe even in your turf grass. This is also causing a hard sodium shell covering your top soil also causing "hard pan" which causes the irrigated water to rest on top and not be properly absorbed by the roots.

As time goes on, the bicarbonates build up more and more and eventually take their toll on your plant material by blocking water and also the minerals occurring naturally in your soil. The only way to treat this is with soil amendments and aeration.

We have some very cost effective methods to treat your soil and ensure a beautiful landscape into the summer. Contact us now, our schedule is filling up. Kevin_sales@qwest.net or 602 353-8877

Is a Landscape Report Helpful??

Asset Landscaping prides itself in our ability to provide pro-active communication to our clients. We have new programs in place that can provide you with service history, internal and external service and irrigation requests, landscape recommendations, and a fast response to your requests and inquiries.

If you are interested in being included in our monthly report program, please let us know what date you would like the report by and we will send you a full report of service and irrigation requests that you have sent, as well as the requests we have made internally. Additionally, you will have a log of when a supervisor has visited your community or property. This can be an excellent tool to provide your Board of Directors, and Owners.

If you are not a current customer of Asset Landscaping and would be interested in more information about our follow-up programs, monthly reports, extensive soil testing for problem soil, and our many landscape services, please call or e-mail us at 602 353-8877 Voice, 602 353-8879 Fax, or Kevin_sales@qwest.net.

Call or e-mail us for a land management proposal.
